BREAK GLASS ACCESS

Break Glass Access provides clinicians with self-service access to patient studies for which you are not the primary referrer.

The screenshot shows the main application window with a search section at the top. It includes input fields for Patient ID, Patient Name, and Accession Number, along with checkboxes for various modalities (CT, DM, ES, LP, MG, MR, NM, RF, US, X-ray, XA). There are also date range fields (From, To) and a 'Data Sources' section with a 'Local Data...' checkbox. A prominent 'BREAK-GLASS ACCESS' button with a right-pointing arrow is located below the search filters. Below this button are two empty table headers: 'Studies' and 'Series'. A 'Close' button is at the bottom center.

This is the first dialog box titled 'Break-Glass Access'. It contains the following text:
This feature allows you to view studies for which you were not granted automatic access.

I understand that I am about to access information for a patient for whom I am not the primary referring physician on record. I warrant that the patient has engaged me to provide healthcare services or that I am providing healthcare services in an emergency situation to a patient that is unable to give consent, and that I am only accessing this information for medical reasons and for the sole benefit of the patient and in doing so I am bound to keep this information private and confidential, in accordance with the Capital Radiology Connect terms and conditions that I have previously agreed to.

Note: This feature allows you to view only studies currently available on the PACS. You do not have access to studies for this patient that are acquired at a later date.

I acknowledge and accept the terms of this confidentiality agreement.
